Here's the latest from Doctor Johnson. If you have not received your flu shot, there is still time.

- Evidence shows that influenza activity has increased both in California and nationally over the last few weeks. Further increases in flu activity may occur in the coming weeks. Although unpredictable, the flu season usually peaks in mid-February.
- This year's vaccine is a close match for the types of flu in circulation
- Although there has been an increase in influenza activity in the last few weeks, the season overall has been milder than in the recent past
